

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A separable apparatus to cushion and dampen vibration, comprising:
an overmold member composed of a mixture of an elastomeric material and a foaming agent, comprising:
a first non-foam layer; and
a second non-foam layer, in conjunction with the first layer, enveloping a micro-cellular foam layer as a unitary, separable overmold member.
2. (Original) The separable apparatus of claim 1, wherein the elastomeric material is selected from a group comprising thermoplastic olefins, thermoplastic rubbers, thermoplastic polyurethanes, polyvinylchlorides, styrenic block copolymers, and combinations of such materials.
3. (Original) The separable apparatus of claim 1, wherein the two non-foam layers and the foam layer are integrally molded with each other by injection molding of resin.
4. (Original) The separable apparatus of claim 1, further comprising a substrate member coupled to the overmold member.
5. (Original) The separable apparatus of claim 4, wherein the overmold member is mechanically attached to the substrate member.
6. (Original) The separable apparatus of claim 4, wherein at least one of the non-foam layers is bonded to the substrate member.
7. (Original) The separable apparatus of claim 4, wherein the substrate member is selected from a group of materials including: wood, metal, thermoplastic resin, thermoset resin, epoxy, ceramic, glass, and a combination of any two such materials.

8. (Original) The separable apparatus of claim 1, wherein the thickness of the foam layer exceeds the combined thickness of the non-foam layers.

9. (Original) The separable apparatus of claim 1, wherein the combined thickness of the non-foam layers exceeds the thickness of the foam layer.

10. (Original) The separable apparatus of claim 1, wherein the combined thickness of the non-foam layers is equal to the thickness of the foam layer.

11. (Original) The separable apparatus of claim 1, wherein the overmold is configured in a predetermined shape.

12.-63. (Cancelled).
